

Protect your son: Don't let them cut *his* penis

Foreskin: NATURAL AND VALUABLE

The majority of the world's men have foreskin, which has purposes including penile protection, sexual lubrication, and unique pleasurable sensations. If unfolded, an adult foreskin would be roughly the size of this card, 15 sq. inches!

Sensitive Infants: PAINFUL CUT

The foreskin is ripped from the glans, crushed, sliced, and cut away. The remainder of the penis is sore for weeks after. Whether or not local anesthetic is used, this violent act is always traumatic.

Intact Body: HUMAN RIGHTS

International medical leaders have condemned American doctors for cutting the genitals of baby boys - there is no compelling medical need!

Beware: FORCED RETRACTION

Boys are born with fused foreskin. Only clean what's seen. Retraction is useless and harmful.

Circumcision: DESTRUCTIVE

Function and sensation are always lost. Complications include excessive scarring, painful erections, skin bridges, loss of the penile head or shaft, and even death!
